

Next Generation 9-1-1 – The Future for Emergency Communications

It's Not Just 9-1-1 Anymore!

With technology available today –we are moving to an Emergency Services System environment

- We will be sharing networks, bandwidth and data
- Multiple public safety and governmental applications on common IP networks

Need to foster partnerships and leverage what we can do for one another

Policies & SOPs need to be developed

Variations in E9-1-1 Current Requirements

Wireline

- No federal requirements
- Some state and local requirements
- Voluntary industry implementation

Wireless

- Federal (FCC) requirements (Docket 94-102)

Multi-Line Telephones Systems (MLTS)

- No federal requirements
- some states have requirements

VoIP

- Federal (FCC) requirements (Docket 05-196, 04-36)

ADA requirements for TTY

- Currently no provisions for Video/IP relay services, text messaging

What We Have Now. . . Different Levels of Service

Wireline

Most Reliable Location Technology

Selectively Routed to Correct Answering Point

Provides Call Back Number and Address

Wireless Phase I

Provides Call Back Number

Provides Carrier Info and Tower Location

Wireless Phase II

Provides Call Back Number

Carrier Info & Tower Location

Approximate Location based on X & Y Coordinates

Accuracy Requirements vary by technology used, and are under review by the FCC

73% of Counties Covered
– 91.5% of Population

VoIP

IP calls to geographically appropriate PSAP using existing

9-1-1 network

Provides Call Back Number and Registered Address

Today's 9-1-1 Challenges: Moving to Digital Broadband

Over 6,000 Public
Safety Answering
Points (PSAPs)

High costs
associated with
each PSAP

Costly, aging
equipment that
needs replacement
soon

Need data
bandwidth,
modernized
network → IP

Caller location
issues

Need for
Interoperability
with other agencies
(voice and data)

Funding needed to
sustain & advance
system

Next Generation 9-1-1 **Vision**

An evolved, fully-functional, Next
Generation 9-1-1 system that is
accessible **anytime, anywhere,
from any device**

Why do we need NG9-1-1?

Current and new 'calling' devices

- Text – IM, SMS, PDAs, other non-voice devices
- Wireless – WiFi, WiMAX, improved cellular interface, hybrid (cellular/WiFi)
- Sensors – environmental, alarms, biometric
- Video, still and motion

Wide spectrum of users, emergency support needs

- Deaf and hard of hearing, speech impaired
- Non-english speaking callers
- Constantly increasing mobile users – location challenges

NG9-1-1 Purposes

Fully replace Enhanced 9-1-1, with all capabilities and functions in place today

Add capabilities to support changes for current and new types of Originating Service Providers

Add flexibility for the PSAPs and 9-1-1 Authorities

Add capabilities to integrate and interoperate with emergency entities beyond the PSAP

IP Networks Supporting NG9-1-1

Use IP networks as they develop (9-1-1 or other existing public safety network)

County, regional, state, national

Link together as a network of networks, nationally and beyond

NG9-1-1 functions run on the IP networks and must meet NG9-1-1 standards

Security issues must be addressed

Expanded data access with wide area/national emergency communications capabilities

3G

- 3G will be discontinued
 - won't be able to send texts
 - Make or Receive Calls
 - Use data services
 - No access to 9-1-1
- Shutdown Services
 - Jan 1, 2022: Sprint
 - February 2022: AT&T
 - Verizon: Dec 31, 2022

Roughly about 9% of US wireless utilize 3G
